

Project of the month

Maximising space Minimising energy consumption

Before

These clients have a newly constructed home on a large block - the possibilities for a beautiful outdoor alfresco were endless.

As their roofline was intricate and they wanted a wrap-around alfresco.

A challenge of this project was to give the clients the large area that they wanted under roof and bring in as much natural light as possible to keep their energy consumption minimal in their home.

After

To match the intricate roofline we incorporated multiple roofing types into our design to make the most of their northern aspect.

Through using energy efficient products like insulated roof panels, we were able to create a sense of space and brightness that with more traditional building methods would be lost.

Our clients now have a beautiful home both inside and out where they can relax all year round. And they have peace of mind knowing that they have maintained the high energy rating throughout the whole construction.

If you love entertaining outdoors and would like to find out how we can help you, then visit www.ultimatealfresco.com.au or contact us on T 0260 406555 or E info@ultimatealfresco.com.au.
